

Design Document
Spartan Esports App
12/12/2024
Final Version

Arsal Zubair, Brandon Looney, Yixi Xie

1. Project Overview

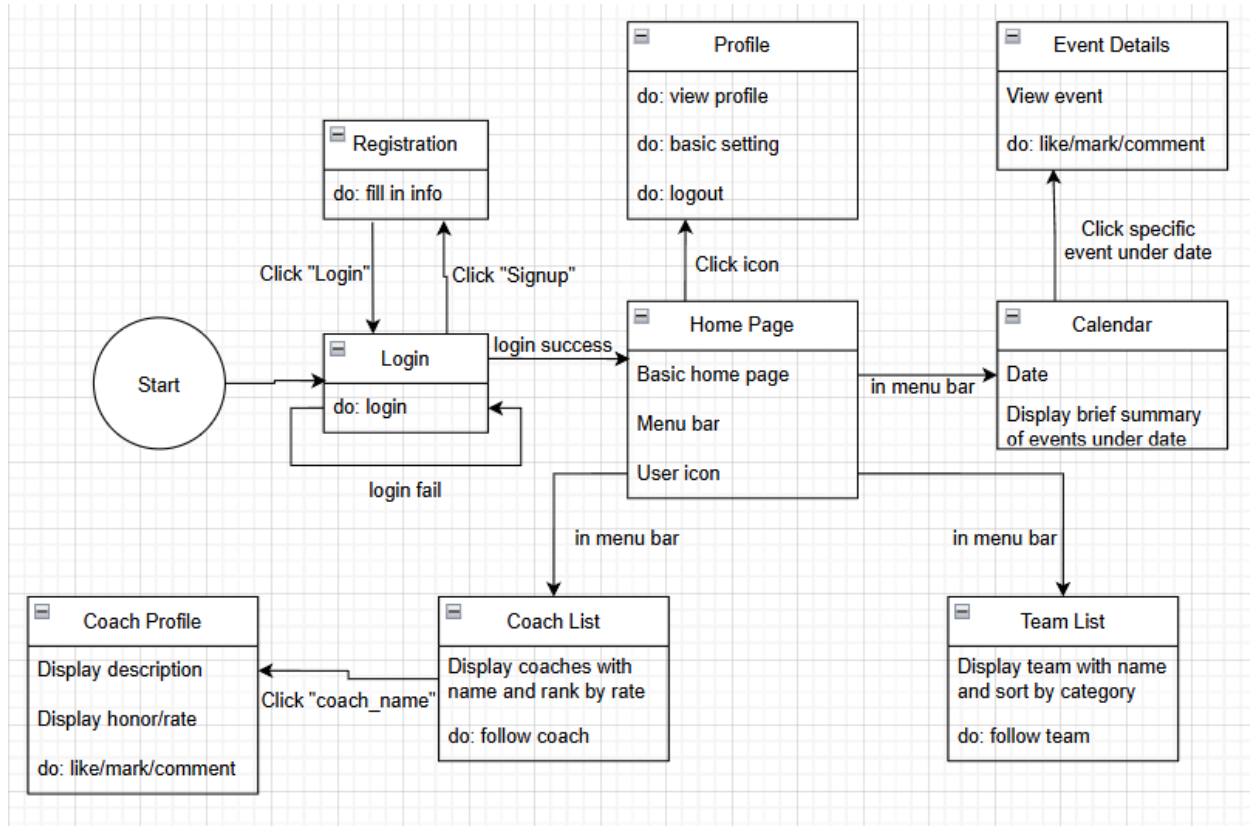

The goal of the Spartan eSports App is to expand the reach of the Esports Club so students can find others who have the same interests as them. Students will be able to join teams and offer their services as coaches to other students to help them improve their skills in the game.

2. Use-case Models - Jack (Yixi)

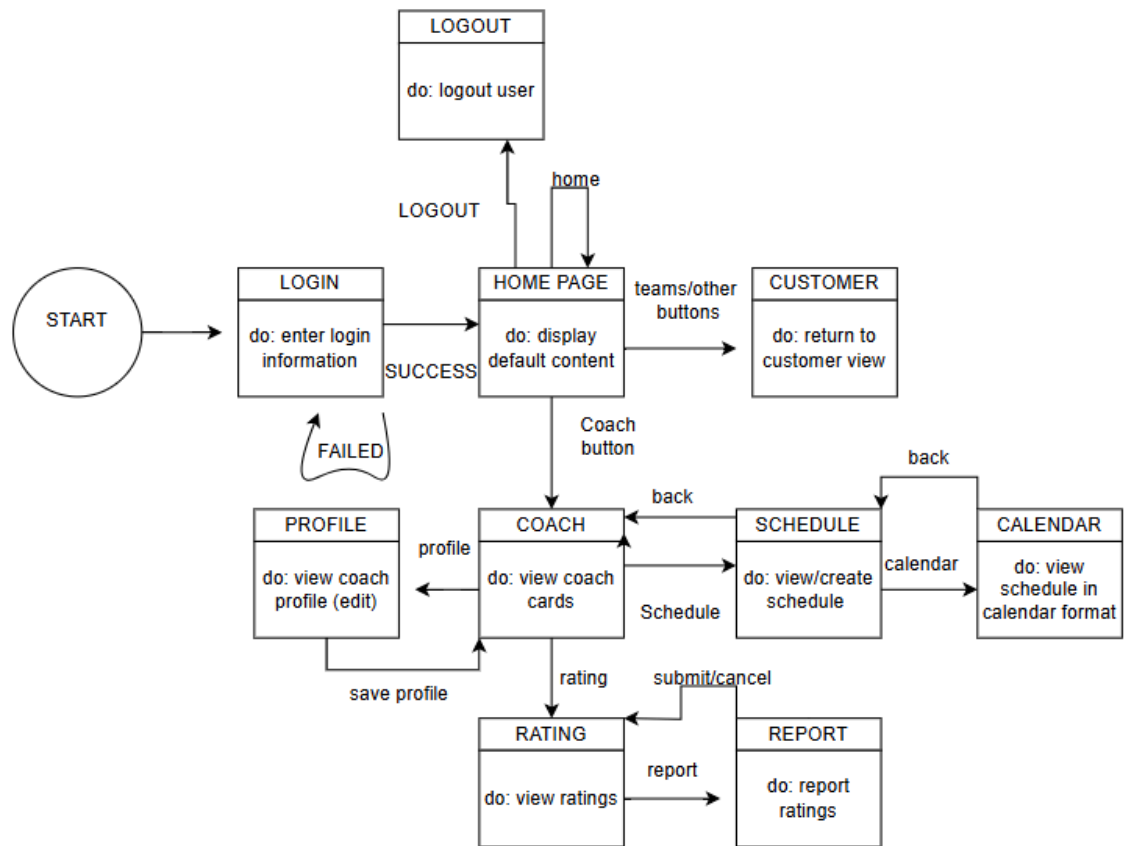

3. State Machine Diagrams

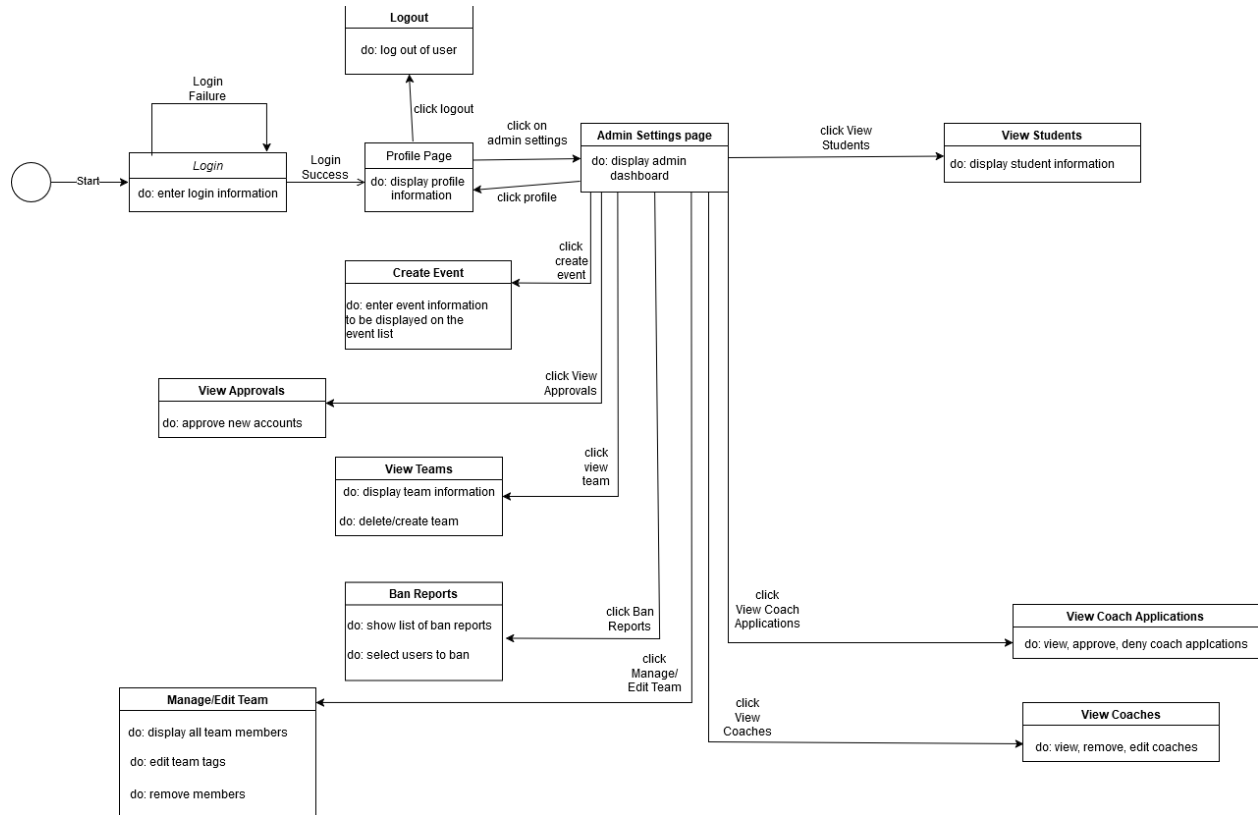

a. User - Jack (Yixi)

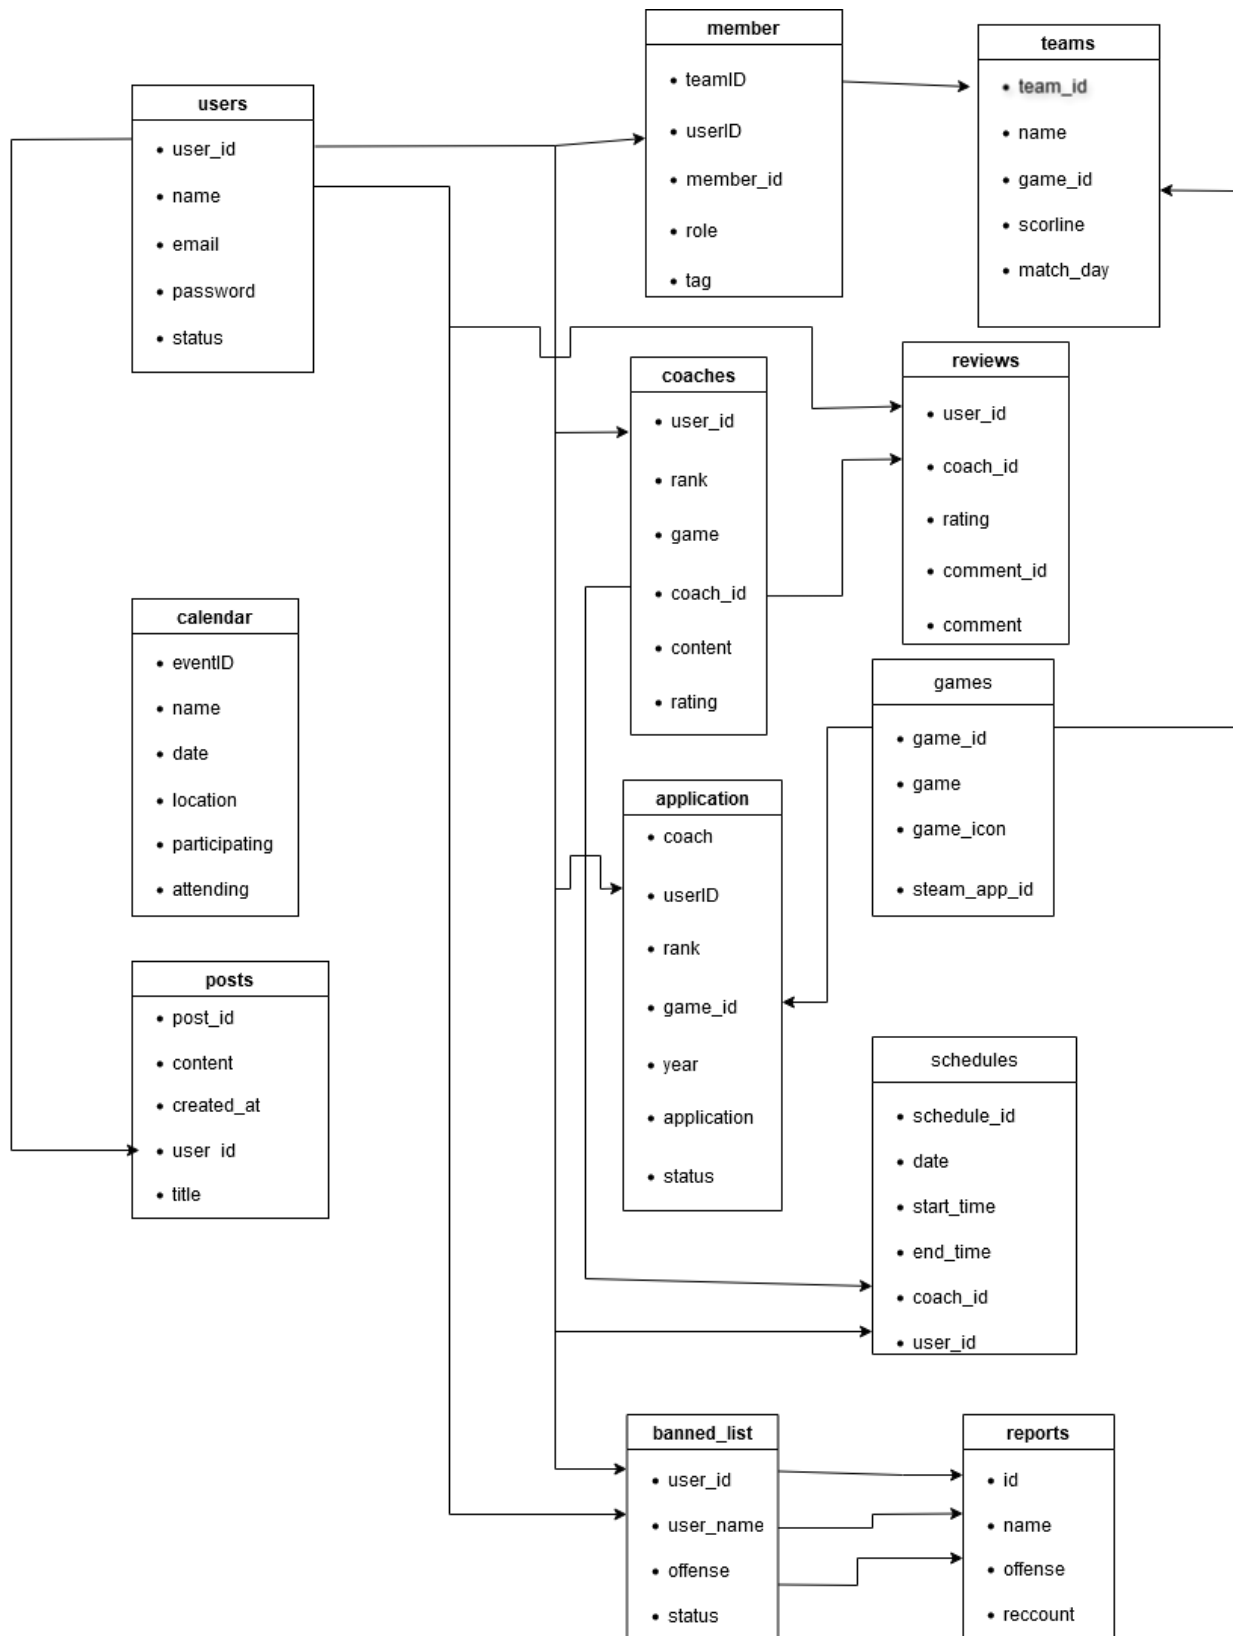

b. Provider - Arsal

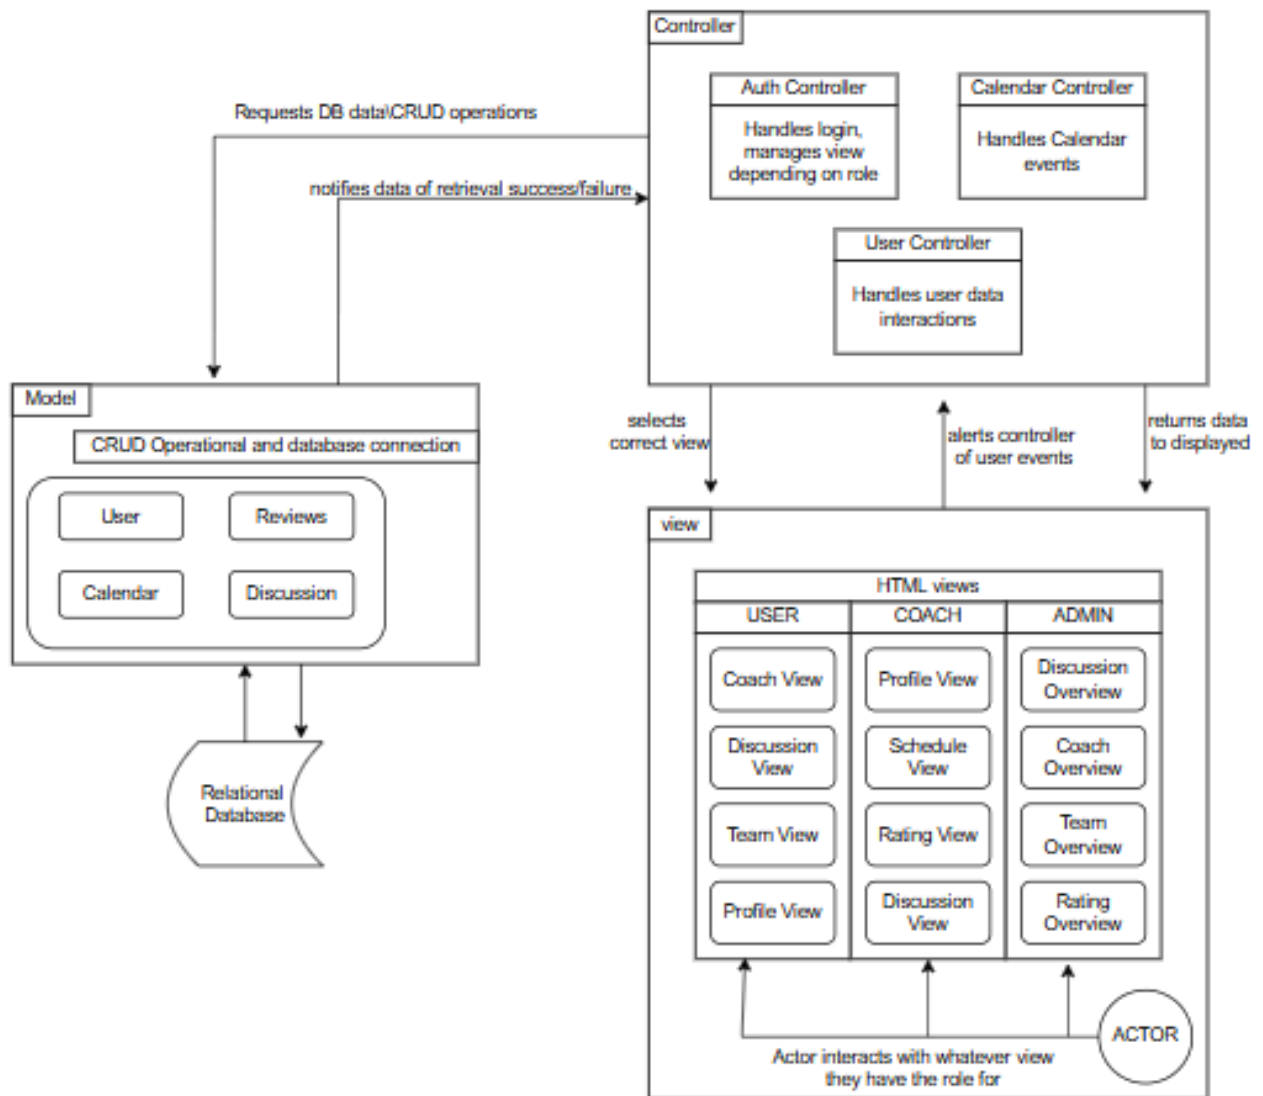

c. Admin - Brandon

4. Database Schema - Brandon

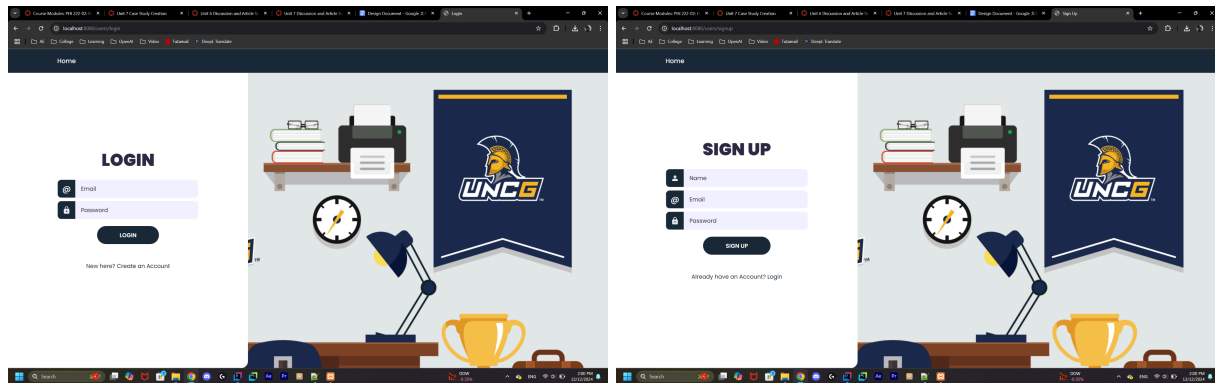

5. Software Architecture - Aarsal

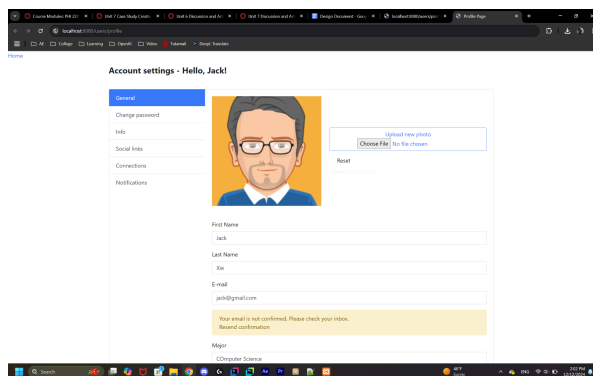

Screenshot for Scenarios:

Customer: (Jack Yixi Xie)

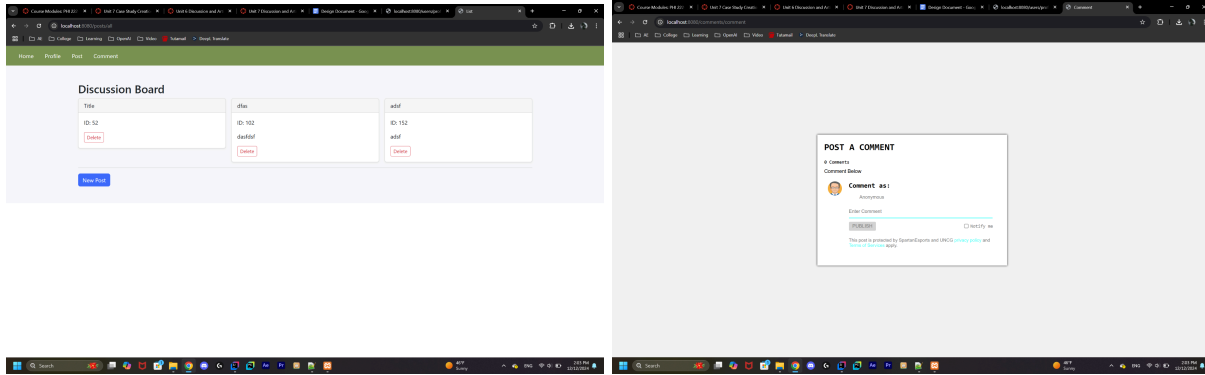

First, the users are directed to the login page, and they are able to transform between login and sign-up by clicking the link below the button.

For the new user, they could create an account with email and password (for login). It will prevent the duplicate email by popping a reminder.

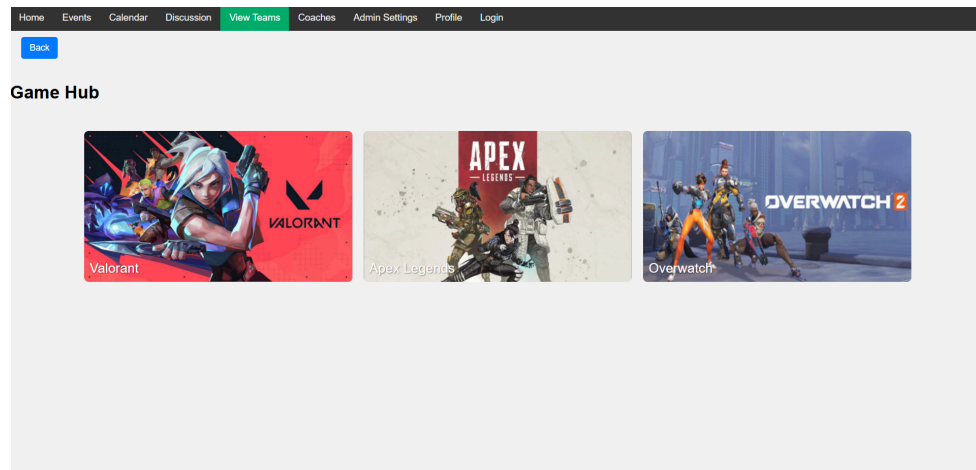

After login, it directs to the profile page, and it allows users to update their information (name, password, email, description). If the users don't want to change anything, they could go to the homepage by clicking the Home button.

Users can direct to the Discussion Board from the navigation bar in the homepage. Here, users are able to post and comment other's with the join key userId. For the comment, the users need to check the checkbox for agreeing with the privacy and terms-of-services to make the publish button from disabled to abled. Our admin could ban users if they don't follow the rules.

Provider: (Arsal Zubair)

- d. Case 1: Providers that are players of the team are able to change their username, only for themselves if logged in.

Admin (Brandon Looney)

Case 1: Admins are given a page for admin related services.

Case 2: Admins can create events to add to the events list. They can do this by clicking “Create Event”.

They can also edit and delete events from the events list after creating an event.
